Action Planning Checklist

Implementing RIME:

- ☐ Use the RIME index to prioritize 100 work orders in your current backlog.

- ☐ Work with your Maintenance Manager to make sure work classifications are appropriate for your organization.

- ☐ Work with your reliability engineer to make sure the criticality classifications are appropriate for your organization.

- ☐ Schedule your work for the next 14 days using the RIME prioritization.

- ☐ Decide on how to document the RIME in your CMMS, e.g. find a field to use for RIME or add it to the work order description.
